1. Difficulties in the production of oil in Rumania are increasing mainly because of deterioration in technical equipment. Production for the month of November reached only 45,000 tons even though 80,000 tons had been scheduled.
2. The management of several oil concerns proposed to the Rumanian Government that a certain amount of oil be exported and the money or credits thus obtained be used to purchase necessary machinery. The conferences took place between representatives of the oil companies and officials of the Ministries for Mines and Commerce and Finance who are continuing their work on the problem. All agreed that it was impossible to obtain the necessary machinery from the Soviet Union.
